

Simple, Efficient, Transparent and Secure – Authorization Management with bi-Cube® IPM

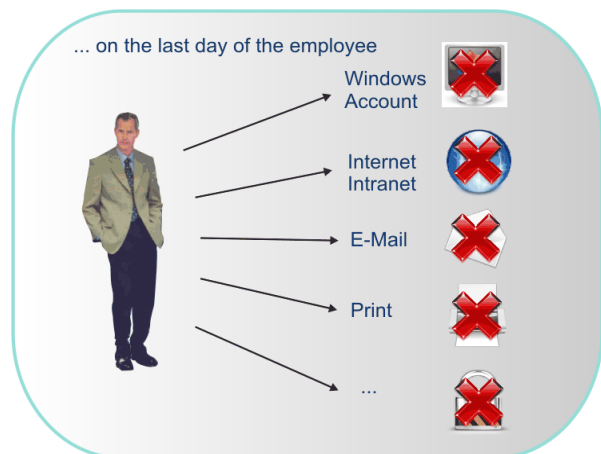

The Identity & Provisioning Management (IPM) solution provides a central, revision compatible and transparent administration of all users, their authorizations and resources. A role concept close to reality and an efficient and mature process management allows to automate the routine tasks in the administration. Security and compliance are increased, business processes optimized and costs are reduced.

The software with its modular architecture offers many integrated functions and tools such as the internal control system or the Single Sign-On (SSO) for the administration area. The simple connection with numerous systems, directories and other applications makes **bi-Cube®** IPM to a flexible and powerful solution for the user and authorization management.

The first day of the employee...

The last day of the employee?
